**Re: Intrawest Development**

Ladies and Gentlemen,

I recently read your letter attached to the "Survey of the residents and property owners of June Lake – Rodeo Grounds Development". As an owner of property on Silver Lake, I am particularly concerned about the potential for further "upstream" land development that will directly affect the running water or ground waters that flows into Silver Lake.

Modest property development above Silver Lake has in the recent past created a severe sediment build-up problem at the creek entrance to the lake, and more development, especially a large resort complex, could have disastrous long term consequences for our lakes and streams.

I am also very concerned that Intrawest might seek to amend the Mono County General Plan, or the June Lake Area Plan in order to maximize the size and scope of this development.

I further understand that the "Rodeo Grounds" land was acquired, or obtained, from the U.S. Forest Service in a swap for another parcel or parcels owned by Intrawest. It seems logical then that the USFS restrictions on the "Rodeo Grounds" property remain intact, and that any future damage or remedial costs relating to the down stream effects of proposed Intrawest development be recognized and agreed to as the responsibility of the Company.

Please protect those down stream from this proposed project in terms of area development, environmental damage and future remediation, and future resident costs.

Sincerely Yours,

Cc: Dave Wilbrecht (CAO Mono County)
